**BRAILE**  
BIOMÉDICA

**BRAILE**  
BIOMÉDICA

► Polyacetal ring coated with bovine pericardium, providing:

- Interface between the ring and leaflets less susceptible to wear, reducing the probability of structural failure
- Valvular surface with greater hemocompatibility

► Leaflets made from a single piece of bovine pericardium, resulting in:

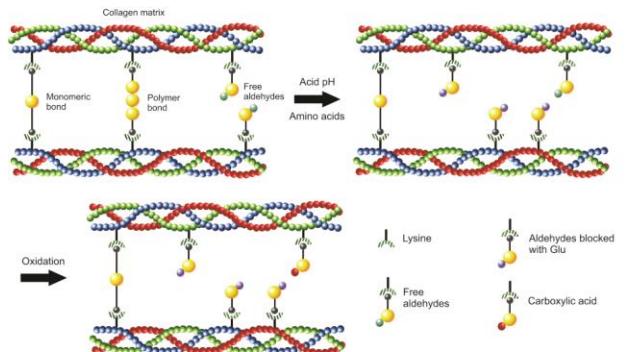

- Better wear resistance and functional fatigue
- More homogeneous behavior in relation to performance
- Guarantee of morphological homogeneity in relation to the distribution of collagen, elastic fibers and mechanical properties

► Formaldehyde storage

► Anti-calcification treatment by the exclusive **REALOG®** process

#### REALOG® Process

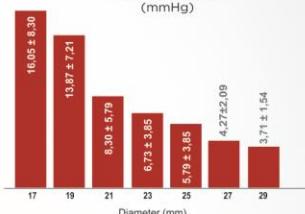

The process adds a treatment with glutamic acid (Glu), followed by oxidation, resulting in the blocking of free aldehyde groups and in the reduction of cross-links of polymer glutaraldehyde, which reduces the post-implant calcification index, ensuring a longer valve life.
